Ms. Carol Walker  
Archdiocese of Denver  
1300 S. Steele St.  
Denver, CO 80210

FAX: (303) 715-2041

Dear Ms. Walker:

As a follow-up to our phone calls today, I am providing some clarification of the sampling protocols used to collect soil samples at the Vasquez Boulevard/I-70 Site. Field samples are collected in accordance with the *Technical Standard Operating Procedure No. ISSI-VBI70-02, Residential Soil Sampling for Yards, and School or Park Soils*, which prescribes the following steps:

1. Prepare a field sketch of the property, identifying permanent structures, play areas, ground cover, temporary obstructions
2. Determine appropriate number of samples based on amount of unobstructed area (typically 15 or 30)
3. Locate samples using wire flags equally distanced throughout the area to be sampled
4. If sod is present at a sample location, use a trowel to remove an approximate 2-inch diameter sod layer and set aside
5. Collect a surface soil sample to a depth of 2" using a hand auger
6. Contain and label the sample
7. Fill the sample hole with top soil
8. Replace sod plug and tamp down

I will await your confirmation that we can proceed to sample without the additional conditions previously requested. The property was mapped last November, so we could collect samples within about 2 hours any day next week. Sampling results will be provided to you after the data validation process is completed. Thank you again for your assistance.

Sincerely,

Marta Green  
Site Manager

RE: ANNUNCIATION SCHOOL

Message: Carol said shed allow access  
w/o conditions if we provide  
written procedures that address  
shallow sampling (low risk of  
utility damage) and site  
restoration. SO it should be  
a go!

cc: KEVIN
